

HeFonte.DLL

String,Color,Size

Function

The HeFonte.DLL sets color and size of a string in a form or report of R:Base for Windows.

Options

- **String** text to display
- **Color** specifies the color of text
supported colors: Red, Green, Yellow, Blue, White, Gray, Fuchsia, Teal, Navy, Maroon, Lime, Olive, Purple, Silver, Aqua, Black
- **Size** specifies the size of text

Description

Display the **string** in the specified **color** and the specified **size** in a form or report of R:Base for Windows (Version 6.5 and later). Backgroundcolor is gray.

Installation

- Copy the file HeFonte.DLL to the directory, where R:Base for Windows 6.5 is installed
- Change RBase.INI :
Insert the follow lines into the [PlugIn] Section:

```
FDrawDLLNr = HeFonte.DLL  
:  
:  
RDrawDLLNr = HeFonte.DLL
```

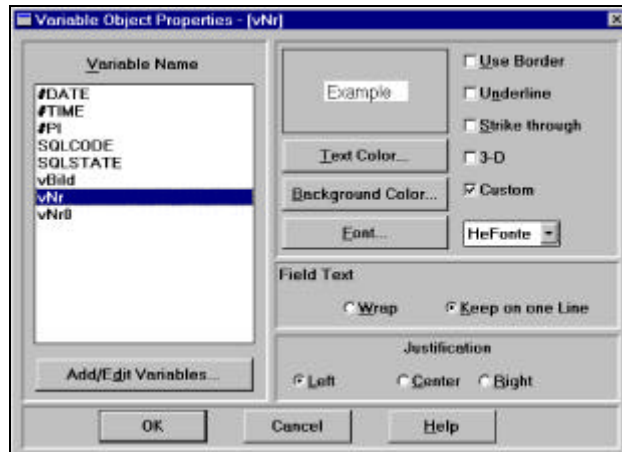

Nr is the next higher number in Rbase.INI.

ID

Remark: HeFonte DLL has the intern ID of 100.

Implementation

If the check-box Custom is clicked, you are able to select HeFonte from the combo-box, with all the DLL's defined in the R:Base.INI file.

The variable vNr is concatenated from the text and the attributes color and size.

as example: '-1111,red,12'
'33123,blue,10'
'0,yellow,10'
